

D3923 Product Data Sheet

General Description

D3923 is one of the Ferotec range of non-asbestos friction materials. It is a flexible, semi-cured, moulded product and is manufactured from a variety of mineral fibres and other non-metallic substances in random dispersion. **D3923** has a marginally lower friction coefficient when compared with **D3915** but has been developed to retain its excellent friction stability and wear resistant properties. This material is also ground on both surfaces during manufacture and is therefore suitable for bonding on either side. As supplied, **D3923** is sufficiently flexible to make fitting to curved metal parts a relatively simple operation, after which the heat generated in service will increase its strength and stiffness. Alternatively, **D3923** can be heat treated in an oven at a temperature of between 200 & 230°C for a period of not less than 60 minutes, either before or after fitting. If supplied in the fully heat treated form (fully cured) it is known by the reference **D3924**. **D3923** is not suitable for operating in oil.

Applications

Automotive rear brake shoes
Industrial drum and band-brake
Crane and excavator brake and clutch linings
Miscellaneous industrial devices

Bonding

D3923 may be bonded using any of the established adhesives recommended for friction material. However, to obtain the best results it is necessary to use a thermosetting adhesive.

Mating Surface

A good quality, fine grained, pearlitic cast iron or cold rolled steel with a Brinell hardness of 180. Cast steels are not recommended.

Availability

- **Roll**
Length 5M
Width 20 to 330mm
Thickness range 3.2mm to 10.0mm
- Sheet size 710mm x 330mm x 3.2 up to 10.0mm thick
- Special shapes and discs on request

TECHNICAL DATA

Friction

μ for design purposes :	Static (cold)	0.32
	Dynamic	0.35

Recommended Operating Range

Pressure	Dynamic	70-860 kN/m ²
	Static	70-2,410 kN/m ²
Max. rubbing speed		25 m/s
Max. continuous temperature		150°C
Max. intermittent temperature		225°C
Max. temperature		325°C

Test Conditions

Application Speed	15m/s
Clamping pressure	0.61 MN/m ² (88.5 ibf/in ²)
Average temperature	Initial Bedding 140°C
Average temperature	Pressure Sensitivity / Speed Sensitivity 80°C

PHYSICAL PROPERTIES

Density	1.98 g/cc
Ultimate tensile strength	4.1.0 MN/m ² (595 ibf/in ²)
Ultimate compressive strength	31.0 MN/m ² (4,500 ibf/in ²)
Ultimate shear strength	3.1 MN/m ² (450 ibf/in ²)
Hardness (Shore D)	50 +/-5

(All physical properties shown above are all mean values)

The information supplied in this data sheet is believed to be accurate and reliable, and was obtained by scientific and laboratory testing. However, since actual conditions of use are largely outside the control of FEROTEC FRICTION LIMITED, it is suggested that this material be thoroughly tested and its suitability for use be determined before final acceptance.
